SUMMARY

Third-year Software Engineering student specialized in React.js. Seeking a Frontend Developer internship to deliver high-quality web interfaces while continuously expanding backend capabilities to evolve into a Full-Stack Developer in the long term.

EDUCATION

Bachelor of Software Engineering

Expected: Jan 2028

FPT UNIVERSITY | HCM

- GPA: 3.5
- TOP 100 STUDENT ACHIEVEMENT AWARDS FALL 2025

PROJECTS

Autowash Pro | Frontend

May 2026 - Jul 2026

A car wash booking platform with slot-based scheduling, online payment, and a tier-based loyalty program.

- Collaborated in a 4-member Agile team (3+ sprints, GitHub Issues) to build frontend interfaces for 5 core modules: Authentication, Booking, Payment, Notification, and Reward Exchange.
- Resolved booking slot conflicts in the scheduler view via an optimistic UI and auto-polling mechanism, preventing duplicate bookings by alerting users of concurrent changes before checkout.
- Handled VNPAY callback recovery for interrupted user redirects (when tabs are closed post-transaction) by building an async client polling worker that syncs payment states with backend IPN.
- Optimized calendar grid rendering performance (displaying 100+ dynamic booking slots with tier-based discounts) using React memoization, cutting interface latency by 60%.
- Decoupled loyalty program rules from UI styling by isolating points calculation and membership tier logic in custom state utilities, enabling easy rule updates without visual code changes.

Tech stack: React · Ant Design (antd) · Axios · Recharts · React Router · CSS · Vite · Git.

Github Repo: github.com/ThienBaoDN12/autowash-pro

Tech Shop | Backend

Feb 2026 - Apr 2026

A role-based e-commerce platform using the Java Servlet MVC2 architecture, handling inventory cataloging, secure user management, and transactional order checkouts.

- Role-Based Access Control (RBAC): Architected a secure request filter chain to restrict endpoint access across 3 roles (Admin, Manager, Customer) and prevent direct access to raw JSP template views.
- System Control & Backend Logic: Developed 28 Controller Servlets covering comprehensive CRUD operations for product catalogs, category structures, and account management, including account state toggles.
- Developed a seamless checkout workflow by managing dynamic shopping cart items in the user session and utilizing JPA 2.1 (EclipseLink) to persist order transactions concurrently into database entities, ensuring strict relational data integrity.

Tech stack: Java EE 7, Servlets, JSP/JSTL, JPA 2.1 (EclipseLink), MS SQL Server, JDBC, Bootstrap 5, CSS3, Apache Tomcat, Git.

Github Repo: github.com/ThienBaoDN12/tech_shop

SKILLS

- **Programming Languages:** Java, JavaScript.
- **Frontend Technologies:** React.js, JSP, JSTL, Bootstrap 5, Responsive Web Design.
- **Backend Technologies:** Java Servlet, JPA (EclipseLink), JDBC.
- **Databases:** Microsoft SQL Server, MySQL.
- **Tools & Platforms:** Git, GitHub, Postman.
- **English:** 6.5 IELTS.
